<td>5 - 9</td>
<td>10 - 14</td>
<td>15 - 21</td>
</tr>
</tbody>
</table>

The maximum score of the GAD-7 is 21, lower scores are better. Scores are assigned in the following manner:

0 = Not at all  
1 = Several days  
2 = More than half the days  
3 = Nearly every day

The total score is simply the sum of question items one through seven. Scores of 5, 10 and 15 are taken as the cut off points for mild, moderate, and severe anxiety respectively. When used as a screening tool, further evaluation is recommended should the score be ten or greater.

Using the threshold score of 10, the GAD-7 has a sensitivity of 89% and a specificity of 82% for generalised anxiety disorder. It is moderately good at screening three other common anxiety disorders - panic disorder (sensitivity 74%, specificity 81%), social anxiety disorder (sensitivity 72%, specificity 80%), and post-traumatic stress disorder (sensitivity 66%, specificity 81%).
